UUB Charge and Peak histograms

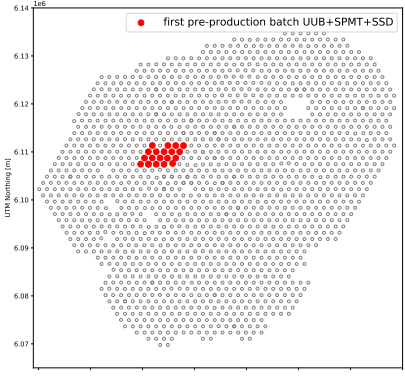
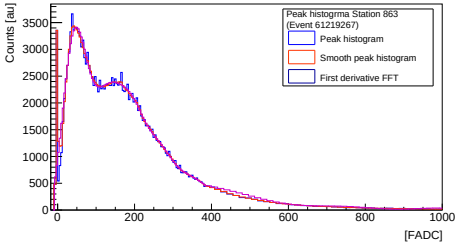
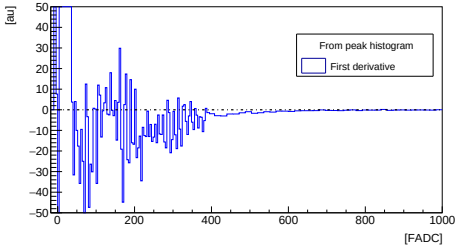
- Station studied: 863 1222 1219 1211 1740 1743 1221 1223 1217 1747 1741 1745 1818 1851 1729 1735 1746 1819 1791
- Data from CDAS.
- Software CDAS, pre-production version.



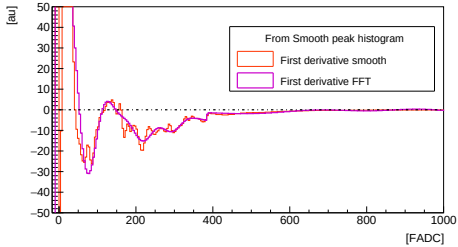
UUB Peak: Derivating histogram



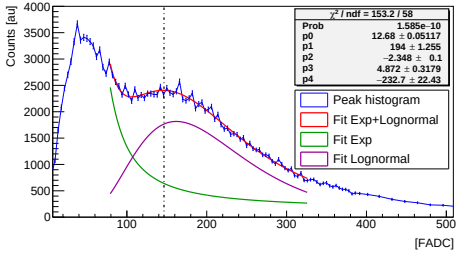


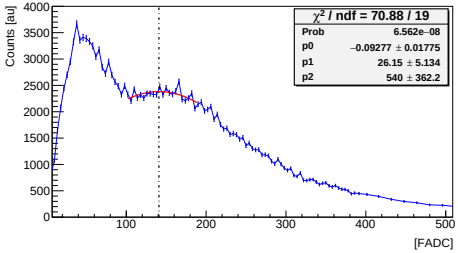
The algorithm: 1. Smooth/FFT Histogram
2. Derivating of smooth/FFT Histogram
3. Identifing Fit range (Slope changes)
4. Fitting

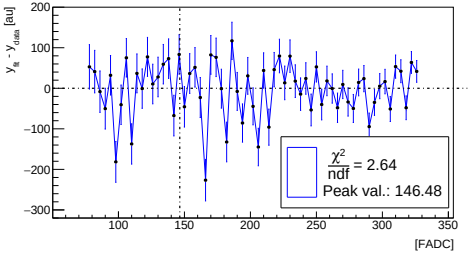
Two function checked:
- Exp. + Log-normal
- 2nd order polinomium

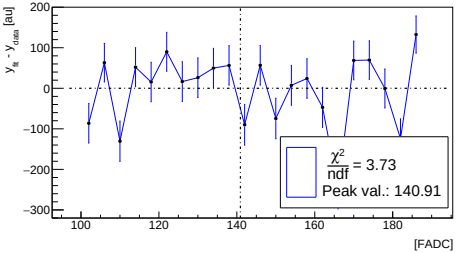


UUB Peak: Fit and Residuals



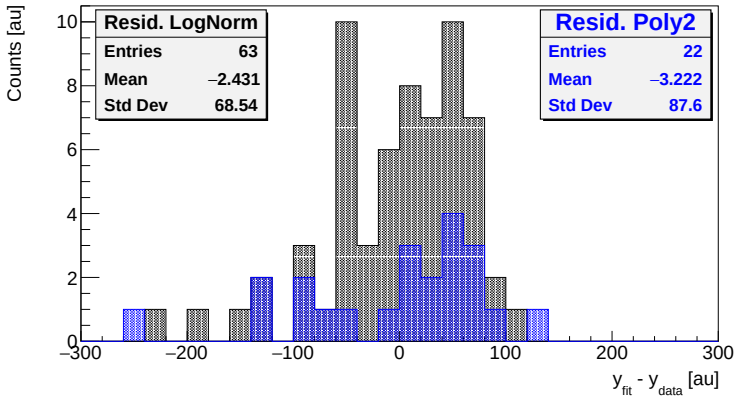




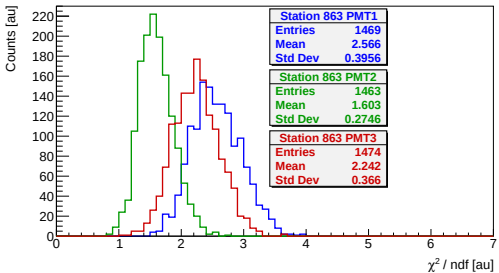


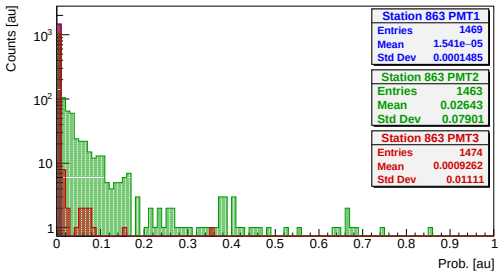
The Exp.+Log-normal fit better than second order polinomium.

UUB Peak: Residuals distribution

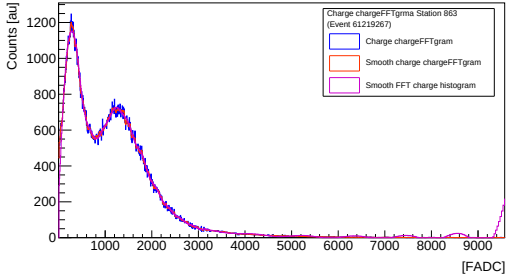


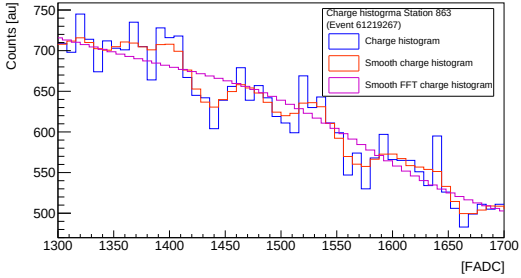
UUB Peak: applying all histograms St. 863, Chi and Prob. distributions

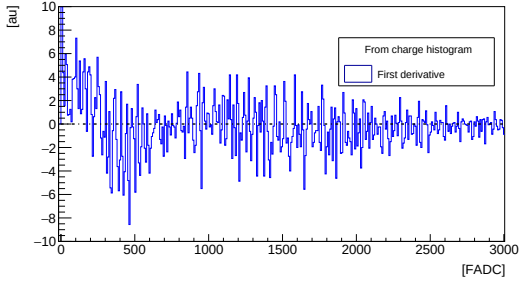


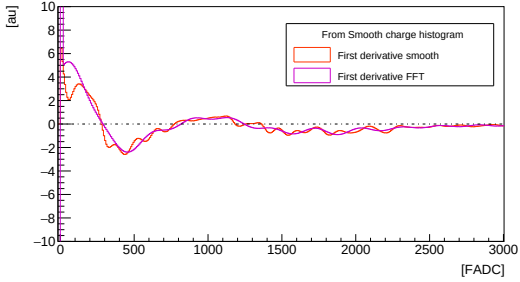


UUB Charge: Derivating histogram

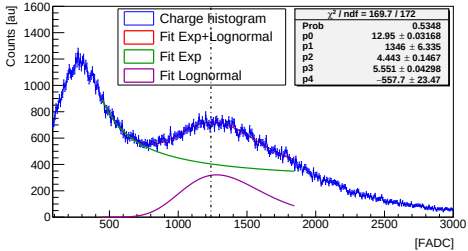


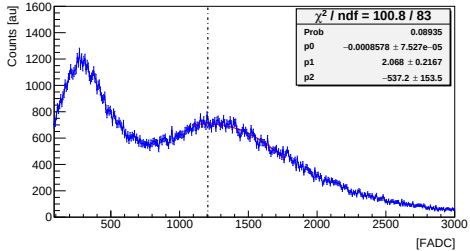


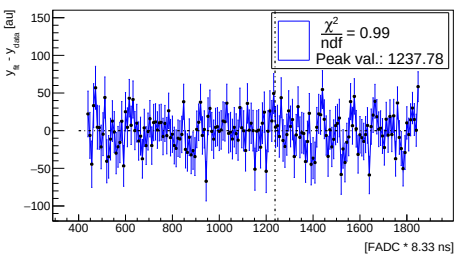


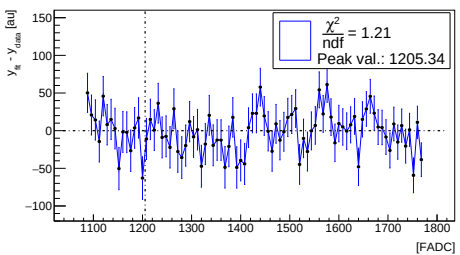


UUB Charge: Fit and Residuals



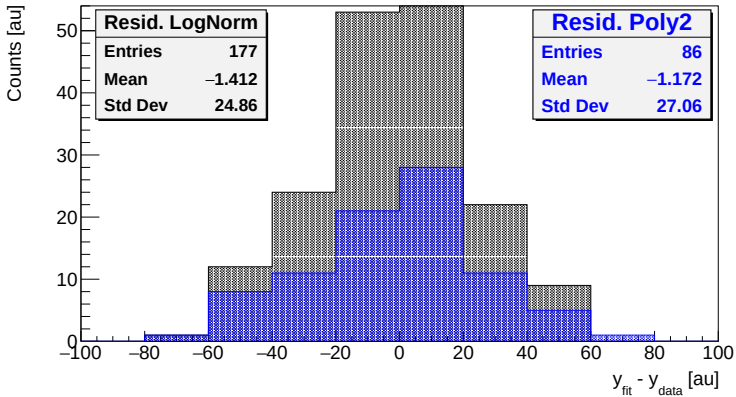




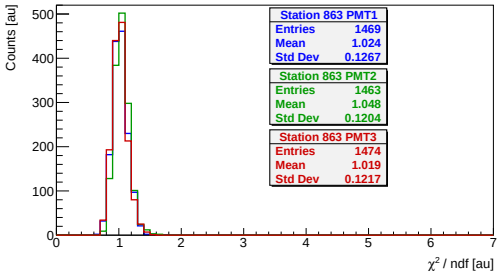


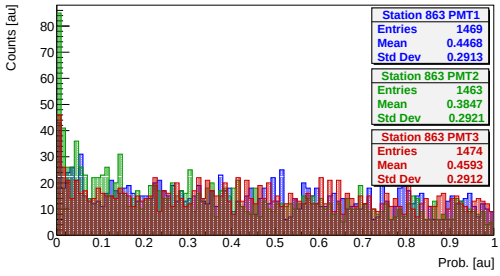
The Exp.+Log-normal fit better than second order polinomium.

UUB Charge: Residuals distribution

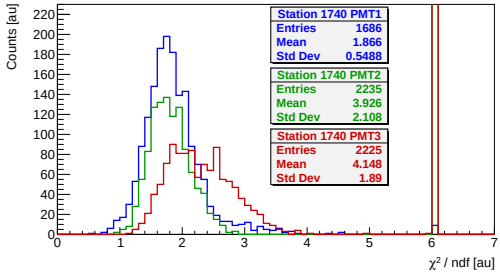


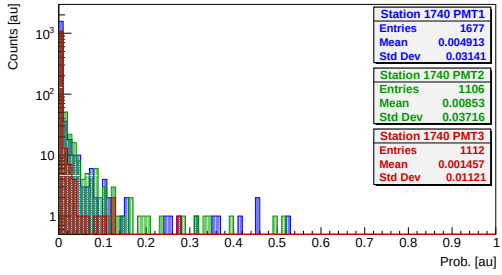
UUB Charge: applying all histograms St. 863, Chi and Prob. distributions





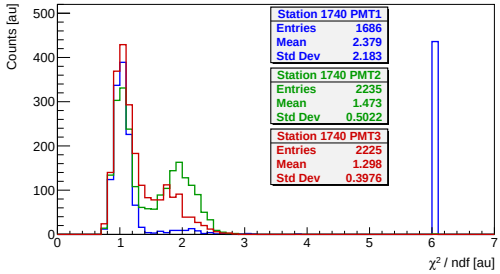
UUB Peak Station 1740: Chi and Prob. distributions all histograms

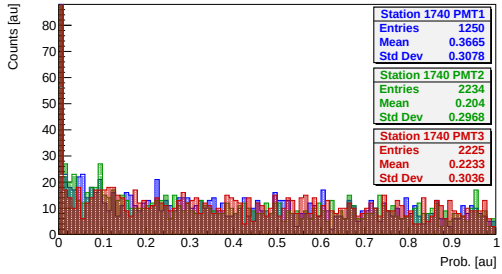




For χ^2/ndf plot, all histograms with χ^2/ndf bigger than 6 are counted as 6.

UUB Charge Station 1740: Chi and Prob. distributions all histograms





For χ^2/ndf plot, all histograms with χ^2/ndf bigger than 6 are counted as 6.

UUB Charge Station 1740: Failed fit
